## USER MESSAGE

just moved three files into this folder. For the website that the assignment description mentions, I want to create, deploy and host website, probably through github pages.

**SUMMARY OF ACTIVITY**

*Building a multi-page promotional website for your AI misinformation detection app to deploy on GitHub Pages. Still need the app name before starting. (disable recaps in /config)*

**USER MESSAGE**

wait now I just need a README.md file that explains this project. Also to show that the product is fictional and that ClaudeCode was used on to make website. Also, I don't want the actual text for the stuff on the website to be filled in. Please edit the website so that all the actual specific text has placeholders.

#### USER MESSAGE

...

#### RESPONSE

Done. Here's a summary of what was created/changed:

**\*\*`README.md` (new)\*\*** — explains the project, names the team, lists all pages, notes the product is fictional, and credits Claude Code for building the website.

**\*\*All 4 HTML files\*\*** — every piece of specific content has been replaced with descriptive `[PLACEHOLDER]` markers:

- Body paragraphs → `[PLACEHOLDER TEXT — description of what goes here]`
- Statistics → `[STAT 1]` / `[STAT 1 LABEL]`
- Card/feature titles and descriptions → `[FEATURE N NAME]` / `[FEATURE N DESCRIPTION]`
- Process steps → `[STEP N NAME]` / `[STEP N DESCRIPTION]`
- FAQ items → `[FAQ QUESTION N]` / `[FAQ ANSWER N]`
- Ethics challenges and mitigations → labeled placeholders
- Research paragraphs and citations → labeled placeholders
- Contact email → `[EMAIL ADDRESS]`
- Google Drive link → `href="#"` with `[PROJECT MATERIALS LINK]`
- Course name → `[COURSE NAME]`
- Team roles → `[ROLE]`

Team names in the footer and team section are kept since those are the real authors.

#### SUMMARY OF ACTIVITY

*Created README.md and replaced all specific content text across the four HTML pages with descriptive placeholder markers. No immediate next action needed unless the user wants to fill in the placeholders or commit the changes. (disable recaps in /config)*
